Battery Energy Storage System

Our Expertise & Services

smartDCS supports BESS projects with specialist fibre optic and copper infrastructure that enables reliable communications, real-time monitoring and efficient site operation. As a trusted design, supply and installation partner to ICP companies, we help BESS facilities maintain stable, interference-resistant connectivity across demanding, mission-critical environments.

Fibre & Copper Infrastructure

Real Time Monitoring

Reliable Communications

DNO Fibre Connections

Lifecycle Support Beyond Installation

Beyond installation, we provide comprehensive lifecycle support to keep your BESS sites performing at peak efficiency over the long term.

Quarterly Visual Inspections

Bi-Annual Testing & OTDR Diagnostics

Connector Cleaning & Certificate Reporting

Historical Performance Analysis

Solar & Wind Infrastructure

smartDCS delivers the communications backbone that helps wind and solar farms operate efficiently, safely and reliably. With expertise in fibre optic and copper cabling solutions, we support the connectivity needed for real time monitoring, performance optimisation and secure site wide communications across wind and solar energy projects.

Our solutions support stable network performance, minimising disruption and enabling informed decision making.

Resilient Infrastructure

Optimised Data Flow

Long Term Operational Support
